

**Bioheat<sup>®</sup> is Safe.**

# Today's Bioheat® Delivers Peace of Mind.

When it comes to your home and family, you want your heating system to be safe and reliable. Here are ways in which Bioheat® Fuel helps ensure safety and dependability:

- Biodiesel blends provide added lubricity and a **higher, safer flash point than conventional fuel** oils and **are lower in Greenhouse Gas Emissions (GHG)**.
- **It is non-explosive.** Bioheat® Fuel is not explosive in its liquid form.
- **There are visible warnings if there is a malfunction.** With Bioheat® Fuel- Fired home heating systems, carbon monoxide leaks rarely happen without warning. If a system should malfunction, it will release smoke or soot so that you know something is wrong.
- **Today's tanks are stronger and less likely to have a release.** Whether your fuel storage tank is hidden in your basement, in a pantry, outside or even underground, today's tanks are composed of state-of-the-art steel and fiberglass — many with double walls of plastic and steel and sensors — and should last for decades.
