

Bioheat[®] is Renewable.

Bioheat® has a bright, green future.

Heating oil has evolved into Bioheat® fuel, an environmentally responsible blend of ultra-low sulfur heating oil and biodiesel made from renewable resources like soybean oil. According to recent studies:

- **Bioheat® Fuel lowers maintenance, improves efficiency and reduces pollution** from heating systems.
- **Bioheat® Fuel blends containing 2% biodiesel (B2) are lower in greenhouse gas emissions than natural gas** when evaluated over 20 years.
- **Bioheat® Fuel blends up to B20 can be used with conventional heating oil equipment** to achieve performance equivalent to if not better than conventional heating oil.
- **Bioheat® Fuel helps to support our nation's farmers** and reduce our dependence on foreign oil.
